

## Your Needs; Our Solutions. Connected.

### Our Story

**XS Applied Technologies** offers a broad range of high-tech solutions for your business. Founded in 2009 as a managed service provider, we have built a team of network and communications professionals at the helm with installation specialists and field service experts to provide commercial technical solutions for public and private organizations throughout the NJ Tristate area. XS has now expanded to Las Vegas, Nevada bringing the same range of service to the desert. XS has been praised for our mastery of our art, our professional courtesy for our clients and fellow contractors, and the integrity with which we approach every project. Our experts are engaging, highly intelligent, and are easy to work with. And our installers are all trained and certified in-house and must complete OSHA 10 before they can set foot on a jobsite. XS Applied Technologies offers unbeatable value for your business. From network infrastructure design and installation; to proactive server maintenance, Expert Support will tailor solution to fit your company's needs – no boiler plate specials or cookie cutter services. Our clients choose us for:

**Dedicated Help Desk** – Most support companies support both managed and non-managed service clients with the same staff which often leaves their support team under staffed. Ultimately it is the customer who suffers extended downtime. Our help desk team works specifically with our managed solutions clients. Our field technicians handle implementation projects as well as onsite service requests for our managed clients. With XS you can count on the service response you expect! ·

**Variable Application Integration** – XS Applied Technologies continually adds manufacturers to our line card. With each comes the factory certifications needed to administer and support their solutions. And in many circumstances, our solutions join the best components from a variety of manufacturers. Here at XS, we want what's best for your business. "Your needs; our solutions. Connected." Award us your next bid for just about anything network-related and you'll see the XS difference from day one. For more on our solutions, please visit us at [www.xsaptec.com](http://www.xsaptec.com).

### STRUCTURE TYPES SUPPORTED

Laboratory □ Non-Residential Building □ Animal Hospital / Kennels □ Education □ Office Building  
Residential Building □ Assisted Living □ Club House / Community Center □ Data Centers □ Design Build □  
Mixed Use □ Museum □ Storage Facility / Warehouse □ Low/Mid/High Rise □ Urban/Civic Development
